

### **AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

#### **Listing of Claims:**

1. (Currently amended) A seat slide comprising:
  - a first guide;
  - a second guide configured to be guided by the first guide to slide a seat, the second guide including a first locking part;
  - a leading member configured to move the second guide relative to the first guide;
  - a cap mounted to the second guide,
  - the cap comprising:
    - a first support inserted into the inside of the second guide and supporting the leading member; and
    - a second support extending from the first support toward the second guide for supporting the second guide, said second support having a distal end;
    - a first wall facing an end of the second guide, the first wall being formed as a unit with one of the first and second supports; and
    - a second wall extending from the first wall, the second wall including a second locking part locked with the first locking part,
  - wherein the distal end of the second support and the second guide are positioned in proximity to each other, thereby defining a gap between the distal end and the second guide,
  - wherein the first locking part has a hole, and the second locking part includes a projection inserted in the hole.
2. (Original) The seat slide according to claim 1,
  - wherein the cap covers an end of the second guide.

3. (Previously presented) The seat slide according to claim 1,  
wherein the second support includes a plurality of supports extending symmetrically relative to the first support.
4. (Cancelled).
5. (Cancelled).
6. (Previously presented) The seat slide according to claim 1,  
wherein the cap is integrally molded of a resin.
7. (Previously presented) The seat slide according to claim 1,  
wherein the second guide includes an upper rail having an upper wall and side walls extending from the upper wall,  
wherein the first support includes a bearing part having an outer circumferential face,  
wherein the second support includes ribs extending from the outer circumferential face toward the upper wall and the side walls,  
wherein distal ends of the ribs and the upper and side walls are positioned in proximity to each other, defining a gap between the distal ends and the upper and side walls.
8. (Previously presented) The seat slide according to claim 7,  
wherein the upper wall and the side walls include first locking parts, respectively, and  
wherein the cap includes second locking parts locked with the first locking parts, respectively.
9. (Previously presented) The seat slide according to claim 1,  
wherein the first support has an elongated hole for inserting the leading member into the elongated hole.

10. (Cancelled).
